

VIBE CODING FOR USER STORY TO FEATURE FILE

Prompt 1.

Read my entire workspace and confirm me what are the files will be impacted if I want to add a connect jira button in UI as a separate layout and want to integrate with jira through API.

The connectivity to jira should happen from details in .env file,

After connection it, in UI, project name field and story title/summary field should appear.

Add fetch story button below

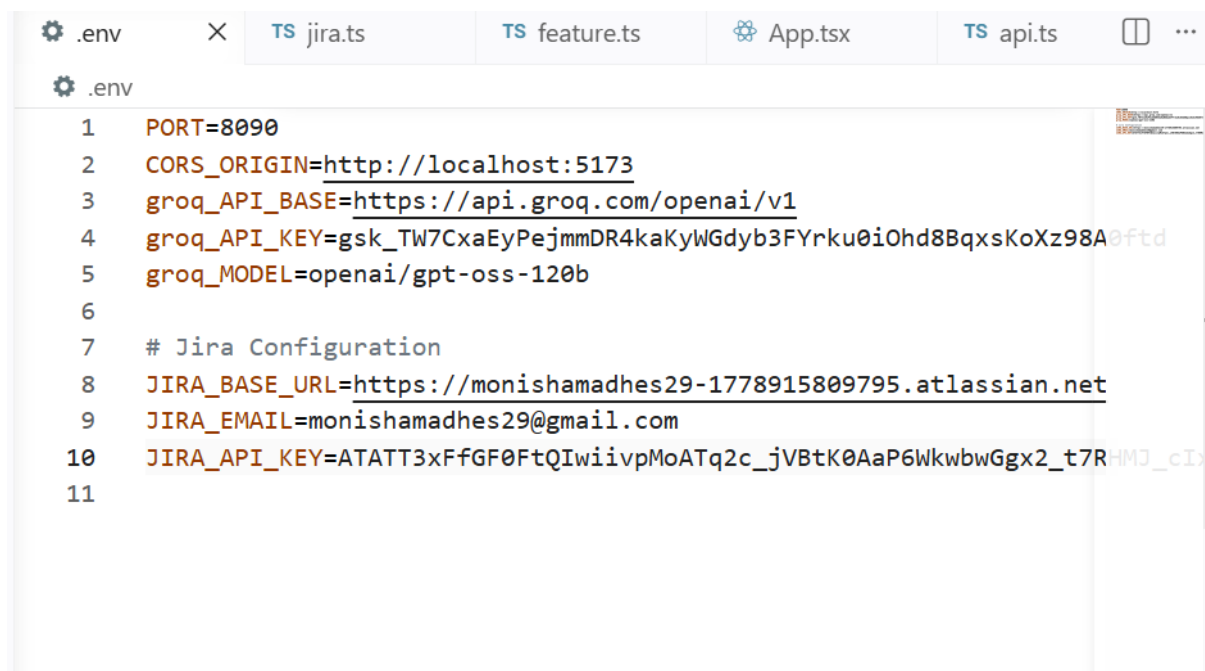

on clicking fetch button, Fetch the story from jira according to the project name and story title and fill the user story-test case generate form.

Map the following from jira to user story-test case generate form

Summary to story title

Description to Description

Prompt 2

Read my entire workspace and confirm me what are the files will be impacted if I want to add a new field as create feature file as button near generate button in UI and also implement the code to generate feature file from the testcases while clicking the feature file button.

Feature files should be viewable in the UI and add download button for feature file Also make the feature file downloadable as .txt format or. Doc format.

Generate Test Cases

Create Feature File

Generated Test Cases

10 test case(s) generated • Model: openai/gpt-oss-120b • Tokens: 2554

Test Case ID	Title	Category	Expected Result
▶ TC-001	Authorized technician can view the Radiology Transactions Worklist	Positive	Worklist loads successfully showing all pending radiology transactions.
▶ TC-002	Filter worklist by transaction status	Positive	Worklist shows exclusively transactions marked as Completed.
▶ TC-003	Search worklist by valid patient ID	Positive	Search results contain only transactions for patient PAT12345.
▶ TC-004	Unauthorized user cannot access the worklist	Authorization	User receives an authorization error and is prevented from viewing the worklist.

▶ TC-009	Technician can update transaction status from worklist	Positive	Transaction status changes to Completed, worklist reflects the update, and a success message is shown.
▶ TC-010	Concurrent access does not degrade performance	Non-Functional	All concurrent users receive the worklist within SLA and data remains consistent.

Feature: Radiology Transactions Technicians Worklist

As a user, I want to radiology transactions technicians worklist so that the related functionality works as expected.

Acceptance Criteria

Given the system is operational, when the user performs the intended action, then the system

Feature: Radiology Transactions Technicians Worklist

As a user, I want to radiology transactions technicians worklist so that the related functionality works as expected.

Acceptance Criteria

Given the system is operational, when the user performs the intended action, then the system should respond accurately and meet functional expectations.

Scenario: Authorized technician can view the Radiology Transactions Worklist

When Log in as a user with the Radiology Technician role

And Navigate to the 'Radiology Transactions Worklist' page

Then Verify that the worklist loads and displays a list of pending transactions

Scenario: Filter worklist by transaction status

When Select the 'Completed' status filter on the worklist

And Apply the filter

Then Verify that only transactions with status 'Completed' are displayed in the list

Scenario: Search worklist by valid patient ID

When Enter a valid patient ID into the search box

And Click the 'Search' button

Then Verify that the worklist displays only transactions matching the entered patient ID

Scenario: Unauthorized user cannot access the worklist

When Log in as a user without the Radiology Technician role

And Attempt to navigate to the 'Radiology Transactions Worklist' page

Then Verify that access is denied and an appropriate error message is displayed

Scenario: System validates invalid status filter value

When Enter an invalid status value (e.g., 'XYZ') into the status filter field

And Apply the filter

Then Verify that the system shows a validation error message and does not crash

Scenario: Worklist displays appropriate message when no transactions exist

When Ensure the system contains zero pending radiology transactions

And Navigate to the 'Radiology Transactions Worklist' page

Then Verify that a 'No records found' message is displayed in the worklist area

Scenario: Performance with large volume of transactions

When Populate the system with 10,000 pending radiology transactions

And Navigate to the 'Radiology Transactions Worklist' page

Then Verify that the page loads within 5 seconds and pagination controls function correctly

Scenario: Search handles special characters safely

When Enter a search term containing special characters (e.g., '@#%\$') into the search box

And Click the 'Search' button

Then Verify that the system sanitizes the input, returns no error, and displays appropriate results (or none)

Scenario: Technician can update transaction status from worklist

When Open a pending transaction from the worklist

And Change its status to 'Completed' and save the changes

Then Verify that the status updates in the worklist and a success confirmation message appears

Scenario: Concurrent access does not degrade performance

When Simulate 50 radiology technicians accessing the worklist simultaneously

And Measure the response time for each request

Then Verify that response time remains under 3 seconds and no data inconsistencies appear
