

Retrieval-Augmented Pipeline – Ingestion and Retrieval

Mongodb URI -

mongodb+srv://monishamadhesh29_db_user:JEV1GYmF8eCjS5nt@genai.7zi2f
sa.mongodb.net/?appName=GenAI

Database name -kb_tescasegenerator

Collection name-test_cases

vector index -vector_index_testcases

Mistral Key – 79SYFKGdCmIFmhqgJS4HzJEayhAqzwXe

The screenshot shows the MongoDB Atlas Search & Vector Search interface. The left sidebar contains navigation options: Search & Vector Search, Search Indexes, AUTO EMBEDDING, Usage, Rate Limits, SHORTCUTS, Cluster Metrics, and Data Explorer. The main panel displays the 'Search & Vector Search' configuration for the 'kb_tescasegenerator' database. A table lists the search index configuration:

Database	Collection	Index Name	Status	Queryable	Type	Index Fields	Documents (Estimated)
kb_tescasegenerator	test_cases	vector_index_testcases	READY	✓	vectorSearch	"embedding", "testCaseId", "module", "title", "expectedResults"	0 (0%) indexed of 0

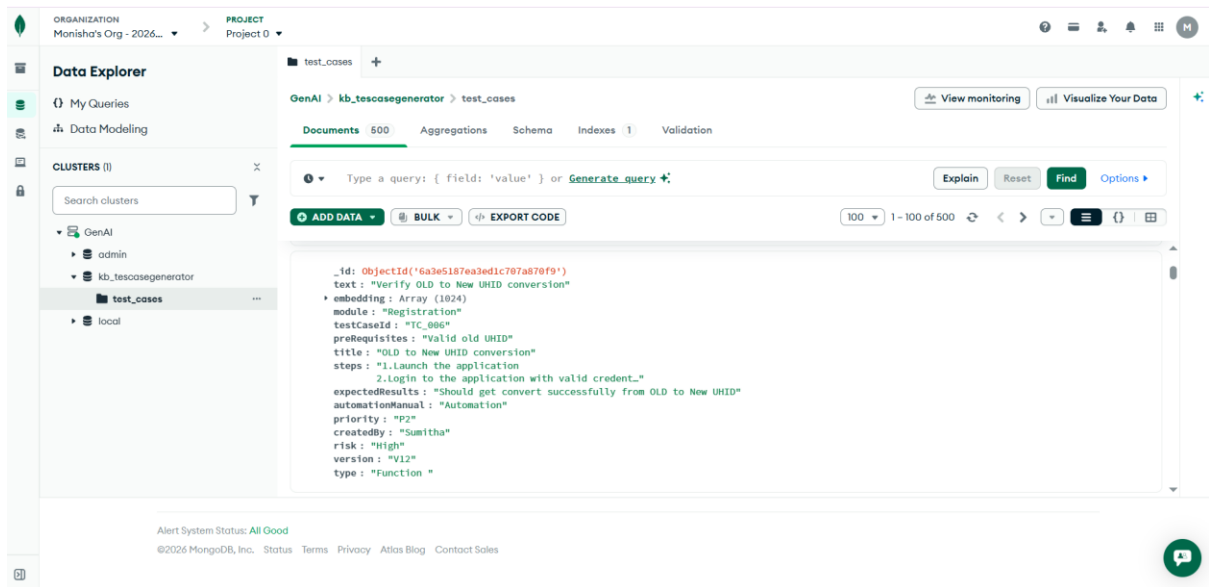

Below the table, there are links to 'Learn more about Atlas Search' and 'Learn more about Atlas Vector Search'.

Ingestion –

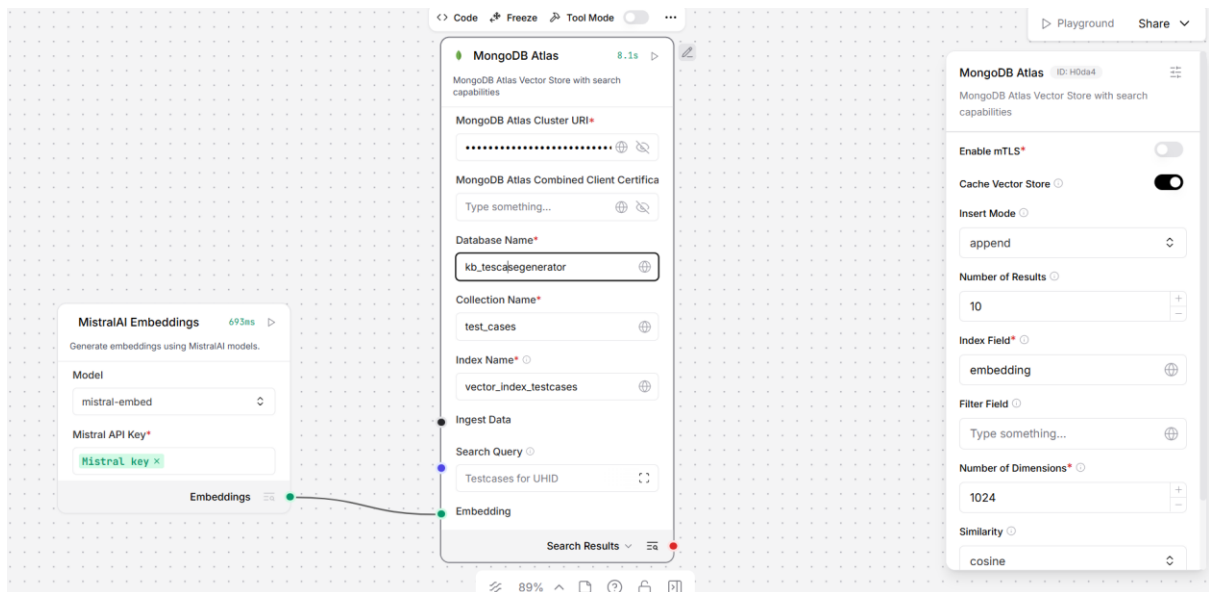

The screenshot shows the Langflow ingestion pipeline configuration. The pipeline consists of three main components:

- Read File**: Loads and returns the content from uploaded files. The file 'Testcases_HealthC...' (302.51 KB) is selected.
- MistralAI Embeddings**: Generate embeddings using MistralAI models. The model 'mistral-embed' is selected, and the Mistral API Key is provided.
- MongoDB Atlas**: Configure the MongoDB Atlas Vector Store with search capabilities. The configuration includes:
 - MongoDB Atlas Cluster URI
 - MongoDB Atlas Combined Client Certificate
 - Database Name: kb_tescasegenerator
 - Collection Name: test_cases
 - Index Name: vector_index_testcases
 - Ingest Data
 - Search Query: Enter a query...
 - Embedding
 - Search Results

The pipeline is connected to the 'Starter Project / RAG - Ingestion - Retrieval Mongo vector DB'.
